

ALL wish to quickly and strongly assure investors in the AIL Almond projects that (in response to news from Timbercorp today) they have invested through a completely different structure that was designed from the outset to give much greater long term security to them and to weather the ups and downs of the financial and horticultural markets that occur.

The diagram below demonstrates that the long term financial viability of your investment in AIL projects is independent of the Project Manager.

It aims to emphasise that you have complete OWNERSHIP of the orchard (all assets are held by an independent custodian) and this gives fundamental security to clients.

Investor Security Features

- All project assets are owned by the investors either directly or via an Asset Trust.
- This includes ALL the land, water, trees, irrigation systems and farm infrastructure.
- All assets are held by an independent Custodian
